V-2 TERRA COTTA

V-19 CHEVY CHASE

V-6 MOSS GREEN

INTERIOR WALLS OF CEMENT OR ROUGH  
PLASTER, AS WELL AS EXTERIOR CONCRETE,  
STUCCO, BRICK OR STONE, MAY BE DAMP-  
PROOFED AND DECORATED WITH DRIWAL.

Driwal is a waterproofing and decorative coating for concrete, stucco, plaster, stone or brick. It is also excellent for damp-proofing and decorating composition building boards, including those frequently referred to as "insulating boards."

Driwal White and Colors penetrate and line the pores with an insoluble material and, drying without gloss, protect and beautify with soft rich tones which bring out rather than obscure the artistic texture of the surface to which applied. Interior walls of cement or rough plaster as well as exterior walls can be beautifully and satisfactorily decorated with colored Driwal. The standard shades and the White can be blended to produce an almost endless variety of tints.

Driwal Blacks, of three consistencies, are chiefly used for waterproofing below the grade line.

Clear Driwal finds a particularly important use in the prevention of stains and discoloration which, from various causes, so frequently mar the beauty of many otherwise imposing structures. Clear Driwal may be safely used on the lightest color and finest texture quarry products. It does not contain any wax or other material that will in any way mar the original condition of the stone, but indefinitely preserves its natural beauty.

For improving the appearance of cement floors and to prevent staining and dusting, BILCHACO CEMENT FLOOR COATING is especially adapted. Color cards gladly furnished on request. Deep penetration affords long wear and low per annum upkeep.

Driwal and Bilchaco Cement Floor Coating are recommended only where a clean, reasonably porous surface affords good penetration and best results are secured where the goods are so applied, either by brush or spray, as to secure this penetration.
